Yes / No

Is the original seat too hard?

Yes / No

Should we retrofit a seat heater?

Yes / No

Passenger's weight with helmet and clothes: \_\_\_\_\_ / Passenger's height: \_\_\_\_\_

**IMPORTANT INFORMATION:**

The higher a seat should be, the harder the seat must be in order to avoid wrinkles. If a seat should be higher and soft at the same time, wrinkles in the leather are inevitable with time! Seats that were already altered before cannot always be altered again! Our upholsterer can only decide whether a seam needs to be made / can be made after he has received the information on your form.

**Note: We accept no liability if, for example, tools that are attached to the bottom of the seat's plastic shell, screws or the like, are sent to us together with the seat and then lost during the upholstering process. We only need the seat. We have to charge extra costs.**
