

90 degree Valve Stem silver

The usual valve stems and the air compressors at petrol stations often are a fiasco. It is not unusual that you remove more air from the tyre than you add. Our high-quality 90 degree valve stem solves this problem. It weighs only 11 gram and is silver anodized.

Attention: To install the 90 degree valve stem you have to remove the tyre from the rim!

The contact area of valve and rim must be planar!

Does not fit for motorcycles with air pressure control!

Does not fit for tyres with inner tubes!

Price per piece.
