

CLS Chain Oiler

The CLS EVO set guarantees a constantly optimally lubricated chain with the CLS EVO chain lubricator. Moreover, the control system of the device includes also the CLS Connect switch module to which accessory devices like GPS or communication systems, headlights etc. can be connected fast and easily. All these devices will then automatically be switched on and off with the motorcycle. It is also possible to add the CLS Heat heated grip system to the CLS EVO set.

All necessary parts for mounting the CLS EVO set to all the common BMW motorcycles are included. The oil tank has a capacity of 50ml which is roughly equivalent to 10,000km. The chain of your motorcycle will be lubricated automatically and protected against dirt to a great extent because the oil does almost not bind any dirt. Provided a good chain quality, the life span of the chain can be extended by two to four times through automatic lubrication. You simply connect the plus and minus cables to the battery and there are no problems with the CAN-Bus system of the motorcycle. Electrical/Electronical accessories can be connected to the CLS Evo with adjustable follow-up time.
