

CLS Connect

The CLS Connect is very helpful electric module where you can connect all electric devices. It eliminates the problems of the Can-Bus System not accepting or not detecting a device (GPS units, Intercoms, ...). You just connect the device to the CLS Connect, which is connected direct to the battery. When you turn off your BMW the CLS Connect also turns off. So no device can empty your battery any more and the CLS Connect filters most of the noises for intercoms which are connected to the electric system of your motorcycle.

This set includes the control unit, all cables with plugs, a fuse (7,5 A) and mounting hardware.

Continuous output: max. 100W

Art-Nr.: 127.00.010
