

GPS Bag for Mobile Phone and Car Navigator

The new GIVI GPS system carrier easily fits to the majority of motorcycles and to some scooters, since it can be mounted onto tubular handlebars (22mm) through the robust supports with which it is equipped. Moreover, it can be easily locked thanks to the rapid lock/unlock system. The S952-S954 permits the use of the same device you have in your car or of your smart phone (if it has an integrated GPS system and satellite navigation software), since it allows for both horizontal and vertical screen viewing. There is also access for external cables. The S954 external protective cover is semi-rigid and the device is equipped with a practical anti-rain lining, which guarantees an effective barrier for water, without interfering with the use.

Art-Nr.: S954

56,50 EUR

GPS Bag 5 inch
