

Cooling Liquid

Borate, nitrite, amine and 2-ethylhexanoic acid free Eni Antifreeze Evo DE. This replaces earlier coolants of the Si-OAT generation and can also be used backwards-compatible with all earlier releases and specifications, such as G11, G12+, G12++ and G13.

eni ANTIFREEZE EXTRA DE lowers the freezing point of the coolant depending on the proportion of mixture with water. With sufficient concentration it prevents the freezing of the coolant in the cooling system. Therefore damages due to frost during the cold season at combustion engines are prevented. The required corrosion protection is already accomplished at low concentration.

1 litre.

Can be mixed with all prevalent cooling liquids.

Art-Nr.: 80131
