

Handlebar Risers with Offset

Handlebar risers with offset: 20mm higher and 30mm closer to the rider

Raising the handlebar by 20mm results in a more upright, much more relaxed seating position. Moreover, the handlebar is brought 30mm closer to the rider which additionally improves driving comfort.

The handlebar riser also makes riding while standing less tiring, which is of tremendous benefit to taller riders in particular.

The overall result is a noticeable increase in stamina and concentration. Long stretches on the motorway are less nerve-racking, and even fast, difficult off-road sections are easier to handle.

Easy to fit in minutes. No need for long cables or brake cables!

With EU street homologation!

Also referred to as handlebar risers, handlebar height increase, bar back risers, barbacks.
