

Stainless steel crash bars

Our stainless steel engine guards will never rust like powder coated steel guards. They are carefully designed to allow clearance for oil changes or valve cover access, so they never need to be removed. Guards attach to the engine mounts not the engine covers to protect the engine heads and not destroy them. Integrated top brackets on each guard allow the rider to mount accessory lights, video cameras, or whatever they can imagine!

BMW R1250RT

Install instruction

Crash bars offer a very good protection, but they can reduce the cornering angle.

Also referred to as engine bars, highway bars.

Caution for Option 719:

The valve covers of the special equipment Option 719 are larger than the standard valve covers. Installation requires a certain level of mechanical understanding to make any necessary adjustments.
