

Power Station NP400

Jump starting the easy way! The NOMAD POWER 400 - a power package on lithium basis (LiFePO₄) - can be used as a booster for vehicles with 12 V batteries (motorcycle, quad, cars, SUV) and also as a mobile energy source for electric devices. Moreover, it can also be used as a emergency or signalling light.

The lithium battery with a starting current of 500A offers an excellent relation of power and size and starts vehicles with discharged 12V batteries (wet, gel, AGM, Start & Stop) in a few seconds. Because the NP400 has an intelligent jump starting cable, the battery and the vehicle's electronic system will be protected as well (anti-flying-sparks system, protection against short circuits / reverse polarity / too high starting currents, thermo-protection of the booster).

The mobile energy source has a capacity of 3Ah, which is enough to operate electronic devices in everyday life (telephone, tablet, computer). It has 2 USB ports (5V / 9V / 12V - 2A / 5V - 2A for charging smartphones, tablets, GPS systems, ...) and one output 15 V - 5 A which is ideally suitable for operating 12V devices (cooling box, ventilator, ...).

Moreover, the NP400 has a LED lamp with high luminous power and 3 illumination modes (normal, stroboscope, SOS). Therefore, it can also be used as an emergency / signalling light.

The LCD colour display of the NP400 shows the charging status of the internal battery in % and the different inputs and outputs. NP400 is an ergonomic product which is light (498g) and compactly designed. The device can easily be stored in the glove compartment or in the travelling bag.

Dimensions: 17,5 x 8,4 x 3,1 cm

Shipment includes a case and accessory parts (intelligent jump starting cable, USB cable multi plug, adapter for the cigarette lighter socket + charging cable)

Charging time: 5 hours

Operation manual

Attention: Not suitable for lithium-ion batteries!

Art-Nr.: 025882

139,00 EUR
