

New cover for seat

Due to customs fees, no submissions of seats from non-EU countries can be accepted! If you have to send in your seat from outside the EU, we are therefore unfortunately unable to offer you our service "new cover for seat".

If your seat cover is damaged or worn, we can equip your seat with a new cover.

For example, if you have your driver's seat reupholstered by us, it can also make sense for visual reasons to have the passenger seat covered with the same artificial leather so that the overall result looks harmonious.

By default, we use non-slip black synthetic leather and black stitching for the seat cover (other colors are also possible). Several colors or different types of synthetic leather, lettering and other customizations are possible at an additional cost.

The original seat cover must be removed, which is why it must not be glued to the foam core! Check whether the cover can be lifted off the foam core! To do this, pinch the cover between your thumb and forefinger and try to lift it (see figure 2). Attention: If the cover is glued, a new seat cover can only be realized as part of a seat conversion (see seat conversion (one-piece seat) / seat conversion (two-piece seat))!

Your seat will be changed - it must be sent in!

The change takes about 2 weeks.

The illustrations of the service "new cover for seat" are examples!

Whether a seam has to be worked in or not depends on the condition of the seat.

Our upholsterer will make the new cover similar to the original cover as far as possible.
