

## LP Oldtimer Power Battery

For all elderly models with 6V battery in order to provide enough power for the start and all other consumer circuits. Developed for the highest requirements!

6V 10Ah

L = 951mm; W = 83 mm; H = 160 mm;

Delivery state: dry charged (no battery acid is included)

All batteries have to be filled and charged before the first use.

The energy taken from a battery must be replenished immediately. Batteries begin to sulfate (destruct themselves) at 12.4 volts. If you drive little, please check the battery every 6 weeks and be sure to recharge it from 12.5 volts - otherwise there is a risk of loss of performance and a significantly reduced service life! Connect seasonal vehicles to a suitable trickle charger!
