

Adjustable Handlebar Risers

Handlebar risers with offset: 30mm higher and 14mm closer to or away from the rider

Raising the handlebar by 30mm results in a more upright, much more relaxed seating position. In addition, the handlebars can be adjusted closer or further from the body in 2mm steps (+/- 14mm), which further increases driving comfort. Due to the adjustable offset, the handlebars can be individually adapted to personal needs and driving characteristics.

The handlebar riser also makes riding while standing less tiring, which is of tremendous benefit to taller riders in particular.

The overall result is a noticeable increase in stamina and concentration. Long stretches on the motorway are less nerve-racking, and even fast, difficult off-road sections are easier to handle.

Usually no need for longer clutch cables or brake cables. However, depending on the handlebar riser setting, the hydraulic lines may be too short. We then recommend using our line adapters, which are sold separately.

Fits on original 32mm handlebar.

With EU street homologation!

Also referred to as handlebar risers, handlebar height increase, bar back risers, barbacks.
