

Fairing Winglet Carbon

VFL.001.S123S.K

These fairing winglets are made of high-quality carbon, were specially developed for the BMW S1000RR (2023-2024) and noticeably improve handling. The pressure on the front wheel is increased and the bike becomes more stable during acceleration and deceleration.

The required brackets for the winglets are already available on the carbon side panels VEL.003.S123S.K & VER.004.S123S.K, which can be purchased separately, to ensure easy installation of the winglets.
