

Crash bars

These crash bars which are made of steel and include a protection pad are always the best choice - whether you ride offroad, on the highway or in urban areas. Your motorcycle is effectively protected against damages due to unexpected fall-downs at all times. The crash bars which are made of a robust pipe-in-pipe construction fit perfectly to the design of the bike and give your motorcycle a unique look.

Crash bars offer a very good protection, but they can reduce the cornering angle.

Install Instruction

In combination with the original additional headlights, the crash bars are mounted without the crash pads (see installation instructions).

Also referred to as engine bars, highway bars.

Replacement crash pads are available for these crash bars (see item 5070050)!

Note: The old version of the pads is no longer available. However, the new version also fits older crash bars and replaces the old version. If the old version (black logo) crash pads are to be replaced with the new version (silver logo), a motorcycle-specific sleeve is required. In this case, please contact us beforehand by email and let us know your motorcycle model and the year of manufacture.
