

ZTechnik Windscreen

ZTechnik® revolutionizes windscreen performance! The advanced 'V' shape and dimensional contours push the wind vortex out and away from the rider's helmet, resulting (in most of the cases) in a peaceful, quiet environment. This improvement is notable for the passenger as well.

Also referred to as windscreen, windshield, shield, screen.

VStream windshields are made from tough Quantum+® hardcoated polycarbonate. The revolutionary Quantum+® rain-repellent hard coating sets new standards in polycarbonate coatings, surpassing even the hardness and scratch resistance of glass! This means that the material used is many times more scratch-resistant than conventional acrylic windshield materials. Thanks to its innovative water-repellent technology, surface tension is created, causing water droplets to effortlessly bead off at the slightest tilt or a gentle breeze.
